

Cross-lingual alignment diagnostics: Euclidean distance vs. angular alignment

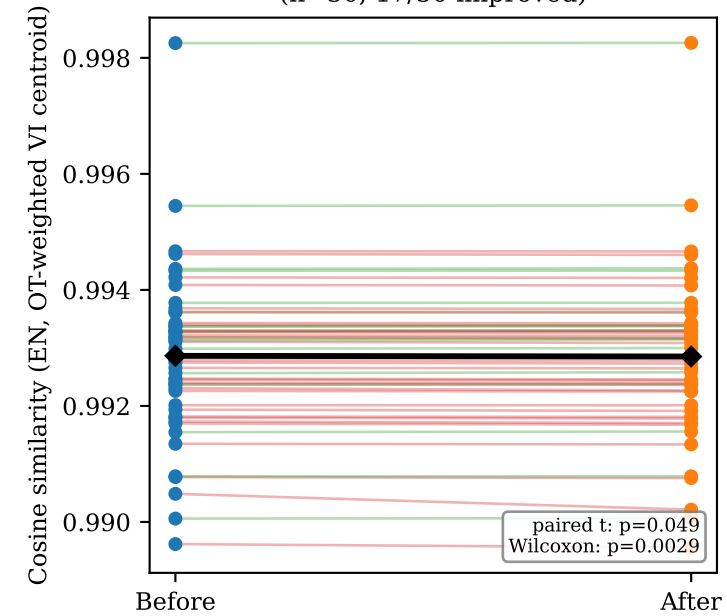

(a) Anisotropy control (n=50)

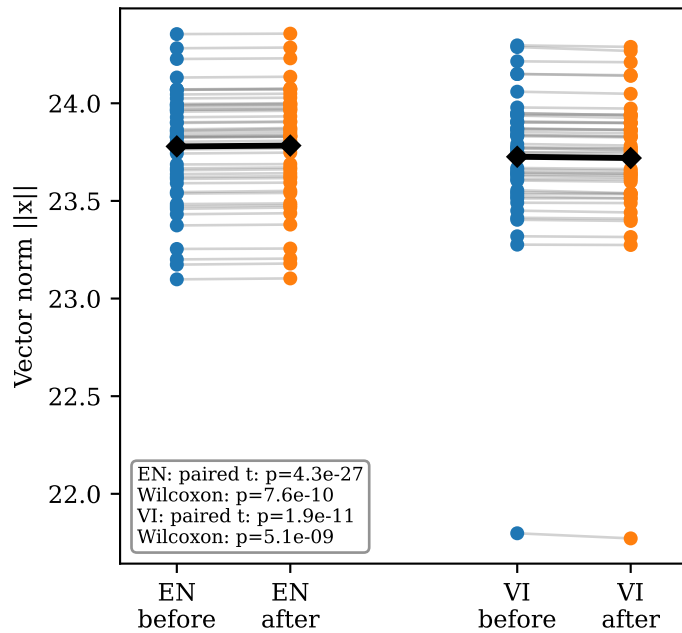

(b) Distance: before vs after (n=50, 18/50 improved)

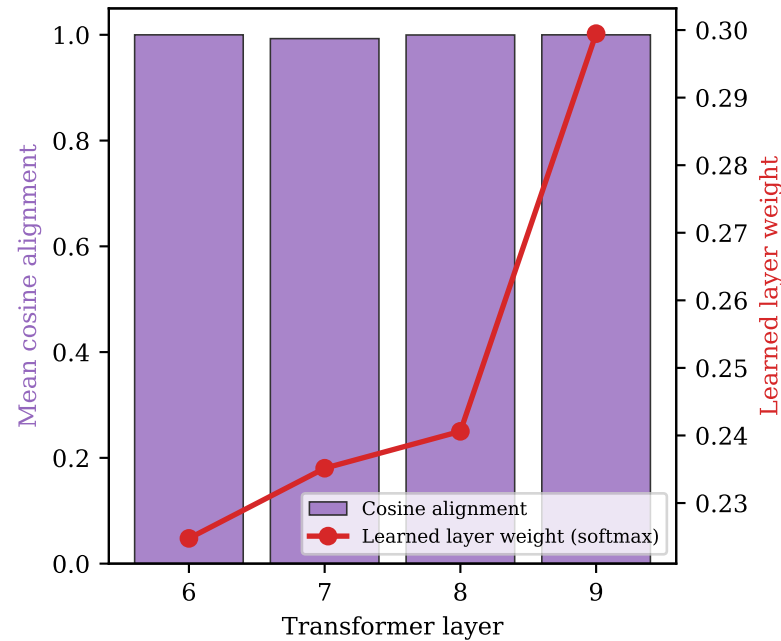

(c) Angular alignment: before vs after (n=50, 17/50 improved)

(d) Magnitude (norm) change (n=50)

(e) Per-layer alignment vs. learned weight (n=50)

(f) Common-mode drift (n=50)
